

Recoup your Toll Charges with tollogic™

The Problems with Pass-through Billing of Toll Charges

Whether you pay your tolls directly to several agencies or to a consolidator, you don't see the toll charges until **30-45 days after the toll was incurred at the earliest**.

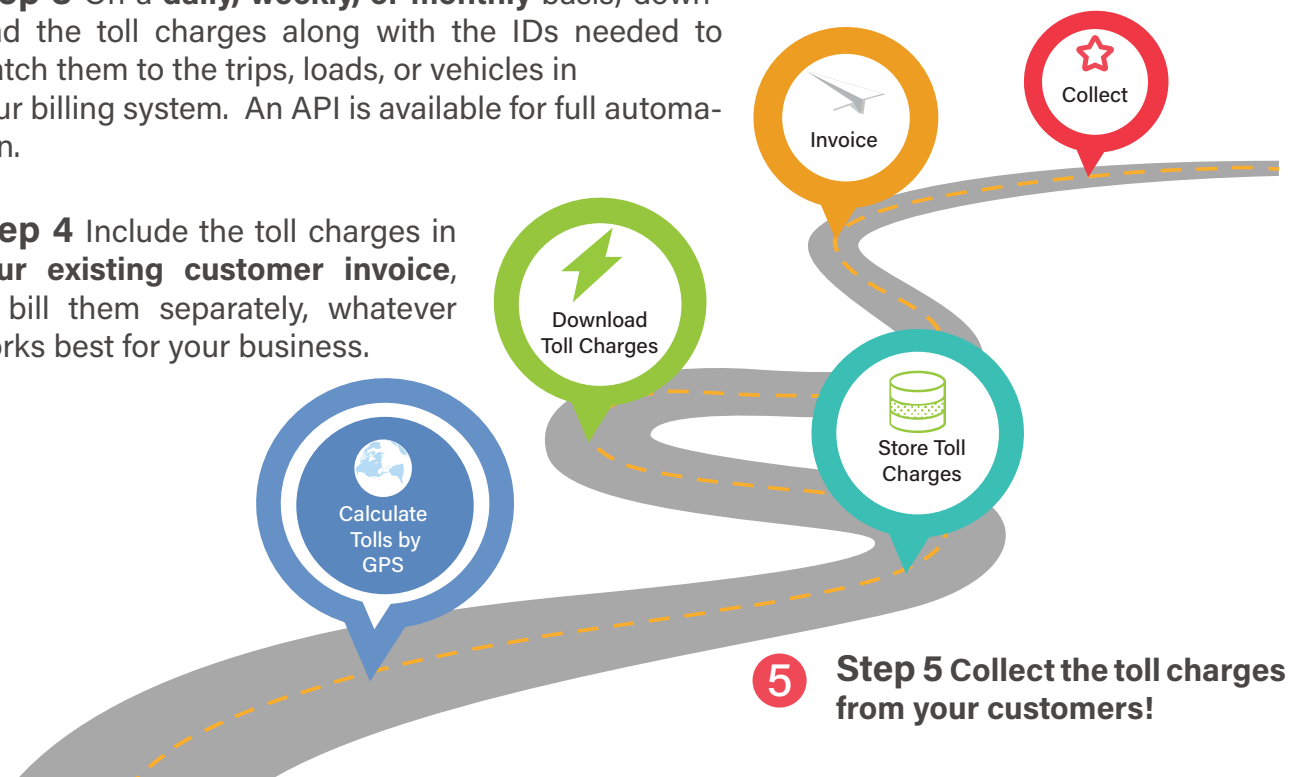

Agencies and consolidators provide **no simple way to match the toll charges** to the customer job in your billing system.

Many fleets just underestimate the toll charges and/or pay them themselves, losing significant revenue on a billing item their customers often expect to pay.

tollogic™ solves this problem and **enables timely invoicing of the toll charges** to your customers possibly before the agency or consolidator bill even arrives.

Recoup the toll charges from your customers in 5 steps:

- 1 Step 1** tollogic™ **constantly calculates the expected toll charges** based on the fleet's GPS location using a nationwide spatial matching algorithm to toll roads, plazas, and bridges.
- 2 Step 2** tollogic™ **stores every expected toll charge** by date, time, location, vehicle ID, trip ID, and transponder ID in a single database across all toll agencies and bridge authorities.
- 3 Step 3** On a **daily, weekly, or monthly** basis; download the toll charges along with the IDs needed to match them to the trips, loads, or vehicles in your billing system. An API is available for full automation.
- 4 Step 4** Include the toll charges in **your existing customer invoice**, or bill them separately, whatever works best for your business.

tollogic™ is available as a standalone product and through the Geotab Marketplace
